Title: Global Touch for Health Online Research Database

Researcher: _____

Sponsors: International Kinesiology College, Touch for Health Kinesiology Association, Laser Solutions, Inc. and Touch for Health Education, Inc.

I. Introduction/Background/Purpose

You have been asked to participate as a subject in a research project entitled "Global Touch for Health Online Research Database" since you have received Touch for Health balances. The purpose of this study is to formally investigate the efficacy of the Touch for Health techniques by creating a centralized worldwide sample data set submitted through the Internet by both professional and layperson practitioners. Only standard Touch for Health Techniques are being studied and you will not be submitted to any experimental techniques in this study.

II. Procedure

If you choose to participate in this study, the Researcher will submit a report of your Touch for Health Testing and Balancing Session(s) via the Internet. This report will report the results and any comments you make that are relevant to the before and after affects of the balancing. Importantly, this report will not contain personal identifying information such as your name, address or other identifying information. Your age at the time of the session and your gender will be submitted.

We ask that you are as objective as possible when stating before and after pain measurements, discomfort, or problems or pains with range of motion of muscles. Importantly, you will also be asked for comments that accurately describe your stress levels, emotional disturbances, physical limitations and other situations that affect your general physical, mental and emotional health. When assessing the result of a muscle test, it will be your assessment that determines the final before and after values/states of the muscle when tests and balancing techniques are performed and results entered into the eTouch for Health software.

There is a small possibility that a scientific researcher in the future may want to briefly contact you through the Researcher for the purpose of validating the results or to hear from you directly about the benefits you received from the Touch for Health techniques. If this possibility occurs, you agree to make yourself reasonably available via your preference of either postal mail, email or telephone contact.

III. Risks

There are no reasonably foreseeable physical discomforts or risks associated with participating in this study. No dangers have been identified with the Touch for Health energy balancing techniques during the 30-year history of the natural healthcare model. If you should experience worsening or continuing symptoms, pain or conditions, the Researcher will refer you to a healthcare professional. You will be responsible for the cost of

any treatment incurred. If any risks are identified during this study, you will be notified.

IV. Benefits

There may not be direct benefits to you from participating in this study beyond those gained from the balances provided by the Researcher. However, the results gained from this study may contribute to a better understanding of Touch for Health which will benefit you and many others around the world in the future.

V. Voluntary Participation and Withdrawal

Participation in research is voluntary. You have the right to refuse to be in this study. If you decide to be in the study and change your mind, you have the right to drop out at any time. You may discontinue participation at any time. However, any information already used to the point when you withdraw consent will not be removed from the online research database. Whatever you decide, you will not lose any benefits to which you are otherwise entitled.

VI. Confidentiality

Your participation will not be identified and information you provide will be kept confidential to the extent by law and not reported to others outside the research project in a way that personally identifies you.

You may ask any questions about this project of the researcher or you may contact the following:

- 1. Matthew Thie, IKC Research Director, thie1@earthlink.net

- 2. Earl Cook, IKC Research Technical Director, ecook@etouchforhealth.com

You can view general information about the rights of human subjects in research at this U.S. Dept. of Health and Human Services website: <http://www.hhs.gov/ohrp/humansubjects/guidance/45cfr46.htm#46.116>

You have read the above, and you agree to participate in this study.

A copy of this consent form will be provided to you.
